

# Artificial Intelligence: Project

**Paper due date: April 28 (Thursday), Demo due date: April 29 (Friday)**

The final course project will be graded based on a typed paper due in class on April 28th and a demonstration of your program(s) for the instructor completed on or before April 29th. In addition all students must submit their source code to the instructor by email prior to their scheduled demonstration. If two students work on a project together they will both earn the same grade on the project.

The paper must contain the following:

- The names of one or both students who will work on the project.
- Division of responsibility (required only for two-person teams).
- A detailed description of the selected problem.
- A description of the program(s) created to carry out the project.
- A summary of the experimental results.
- The conclusions of your experiment including a discussion of any surprising discoveries.

The paper must be typed (not handwritten) on normal letter-sized paper. It will not be graded specifically on length but a complete paper with the appropriate level of detail should be between 4 and 5 pages long (11pt font size, double spaced). *The original graded proposal must be stapled to the back of the paper.*

Each team must schedule a 15 minute appointment with the instructor to give a demonstration of their program on April 28th or 29th. Available times will be posted a week prior to the deadline and appointments will be granted on a first-come, first serve basis. Only one team member needs to be present during the demonstration.
